Card Sheets

Each card constitutes a single panel of three panels on a "card sheet" (patent filed) or any combination that works best for the issuer. The card sheet has approximately the same dimensions of larger international currencies like the Danish Kroner (as illustrated to the right). Most ATM equipment utilizes fairly standard currency cassettes that accommodate currencies of varying sizes, including BATM's card sheet dimensions of 6 3/8" x 3 1/8". The plastic card sheet is about half the thickness of standard payment cards (14 – 15 mils or 0.0014 – 0.0015 of an inch). The cards enable additional revenue and marketing opportunities for advertising and promotion coupons for businesses.

Sample Card Sheets

Samples of various card sheets appear below and on the next page. Card sheets can be configured to handle cards with varying lengths and combinations (i.e. two cards with magnetic stripes or displayed lengthwise on the card sheet).
